

6 Week Evaluation Check List

Pre-Evaluation

Watch the [MRDCL introductory video](#) (40 minutes). Produce a checklist of features that you need if you are unsure whether [MRDCL](#) meets your needs. MRDC will respond to your list with candid answers.

Week 1

Watch [introductory MRDCL videos](#) to learn the basics. It is usually a good idea to ask us to recommend a programme of videos for you based on your experience and goals. Seek support if anything is unclear. Attempt first simple task to become familiar with [MRDCL](#)'s language – this can be a brief frustrating period.

Week 2

Think of 2 or 3 examples of things that are not straightforward that you would need to do in [MRDCL](#). Watch the [videos](#) related to these topics or ask MRDC to explain the best practice.

Week 3

Produce a list of anything that is not clear to you. Arrange an [online session](#) with MRDC to fast track you to the next level. Ask MRDC to look at your work in the first two weeks to see if it could be improved.

Week 4

Try to produce results for a real project. Don't pick the easiest project and don't pick the hardest project. [Seek help](#) from MRDC if you need it. Ask MRDC to evaluate the work you have produced.

Week 5

Consider all the challenges that you feel you need to understand in using [MRDCL](#). If there are videos, covering the topics, that's fine, but if not [ask MRDC](#) to prepare an online session to explain concepts and show examples.

Week 6

Now, look at [MRDCL](#)'s productivity features and understand ways that you can use a template to make everything you've learnt even more efficient. This is arguably the most important part of the process, but it only makes sense to evaluate last. Try a couple of examples.
